

Skills

Programming Languages

- JavaScript | TypeScript | ES6+ | Node.js | React.js
- Java | Python | SQL
- C | C++

Technical Expertise

- Full-Stack Web Development
- API Architecture & Integration
- Legacy Code Refactoring
- Process Automation & AI

Tools & Platforms

- Salesforce Commerce Cloud (SFCC)
- Jira | Confluence
- Git | GitHub | Bitbucket

Operational Processes

- Agile | Scrum | SDLC
- Unit Testing | Regression Testing
- Incident Response

Education

Bachelor of Engineering (Honours)

Computer Systems Engineering
The University of Auckland

Professional Experience

Platform Enablement & Automation Manager

The Warehouse Group

May 2026 – Current

- **Own the automation roadmap** for Salesforce Commerce Cloud ecommerce platforms across The Warehouse and Warehouse Stationery, developing AI-assisted tooling and custom-built solutions to eliminate manual processes.
- **Manage vendor relationships** and support platform users as the technical SFCC SME for the Omni Experience team.

Solution Engineer

The Warehouse Group

Aug 2021 – Mar 2023, Dec 2023 – Feb 2026

Served as a primary technical anchor for the major e-commerce brands The Warehouse, Noel Leeming, and Warehouse Stationery, balancing **full-stack feature development** with mission-critical **application support**.

- **Engineered full-stack features** and maintained SFCC core functionalities across major retail brands, ensuring high-performance usability for high-traffic storefronts.
- **Translated application support insights into full-stack solutions**, preemptively identifying and remediating customer usability issues during development.
- **Mastered complex legacy architecture** as one of only two developers capable of maintaining the Warehouse Stationery platform, delivering critical bug fixes and feature enhancements without service interruption.
- **Resolved P1 critical incidents** and other urgent technical failures as a designated on-call engineer, ensuring 24/7 system coverage and rapid restoration of core e-commerce services during key business periods.
- **Conducted technical investigations** into script-blocking behaviours to replace third-party Afterpay components with custom-built alternatives, successfully resolving payment gateway accessibility issues.
- **Enhanced site observability** and **reduced alert fatigue** by implementing precise New Relic alerting thresholds for site response time and critical automated jobs.
